

NeuroScript Hiring Test

Task Overview

You are required to recreate the provided Figma design as a live web page.

Figma link:

<https://www.figma.com/design/L1tD3C2MOMlknplscgOJ50/NeuroScript-Hiring-Test?node-id=0-1&p=f&t=hYkgHkFIK9iDcLP6-0>

The goal of this test is to evaluate your frontend implementation quality, attention to detail, ability to structure a clean codebase, and your understanding of building content that can be updated without redeploying the application.

Requirements

Please build the page according to the provided Figma design.

The page content should be customizable from the backend or a simple content management structure. This means text and images should be editable without requiring a new deployment.

You can use any suitable stack, but the implementation should be clean, scalable, and easy to understand.

Expected Deliverables

Please submit the following once the task is completed:

1. Live deployed URL
2. GitHub repository link with the complete codebase
3. Loom video explaining the completed work and showing the demo
4. A short explanation of how the content can be updated without redeploying

General Instructions

Use of AI tools is encouraged to work more efficiently, but the final output should be properly reviewed and polished.

Focus on clean UI implementation, responsiveness, reusable components, and maintainable code.

The design should closely match the Figma file in spacing, layout, typography, colors, and overall visual quality.

The website should work properly on desktop and mobile screens.

Please make sure the GitHub repository is public or accessible so we can review the code.

The Loom video is compulsory. In the video, briefly show the live website, explain the structure of the codebase, and demonstrate how the page content can be updated.

Evaluation Criteria

Your submission will be reviewed based on:

1. Design accuracy
2. Code quality
3. Responsiveness
4. Component structure
5. Backend/content customization approach
6. Deployment quality
7. Clarity of Loom explanation
8. Overall attention to detail

Submission Format

Please share your final submission in this format:

- Live URL:
- GitHub Repository:
- Loom Video:
- Short Notes:
